I. Overview for the Bureau of Prisons, Buildings and Facilities (B&F) Appropriation

1. Introduction and Background

The Bureau of Prisons (BOP) was established in 1930 to provide more progressive and humane care for federal inmates, to professionalize the prison service, and to ensure consistent and centralized administration of the 11 federal prisons in operation at that time (now 122). The mission of the BOP, an agency of the Department of Justice (DOJ), is to protect society by confining offenders in the controlled environments of prisons and community-based facilities that are safe, humane, cost-efficient, and appropriately secure, and that provide work and other self-improvement opportunities to assist offenders in becoming law-abiding citizens. Electronic copies of the Department of Justice's Congressional Budget Justifications and Capital Asset Plan and Business Case exhibits can be viewed or downloaded from the Internet using the Internet address: https://www.justice.gov/doj/fy-2021-CJ.

The BOP is a critical part of the federal criminal justice system. Arresting authorities, prosecutors, judges, and community members rely on the BOP to ensure the over 153,000 inmates in custody are accounted for at all times, are treated humanely and with dignity, and are returned to their communities with the training and skills they need to be productive law-abiding citizens. The BOP must carry out these duties while ensuring that staff are working in a safe environment and have the tools, training, and support they need on a daily basis.

BOP requests a total of \$179,300,000, with 59 positions and 59 FTE for the Buildings and Facilities (B&F) appropriation. This budget request will provide for the most critical and priority modernization and repair (M&R) needs. In addition, this request includes cancellations totaling \$886,456,000 in unobligated Buildings and Facilities balances.

2. Challenges

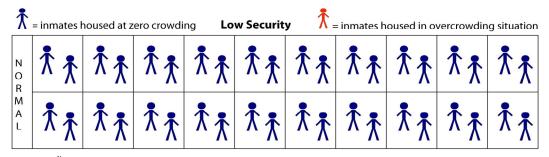

During the first five decades of the BOP's existence, the number and type of inmates BOP housed remained consistent. Beginning in the 1980s, however, federal law enforcement efforts and new legislation dramatically altered sentencing in the federal criminal justice system, bringing about a significant increase in the number and types of persons incarcerated for federal offenses. Largely as a result, the BOP's population doubled in the 1980s and doubled again in the 1990s. In the late 1990s, the BOP began absorbing the DC inmate population due to the National Capital Revitalization Act. The aftermath of September 11th also brought more inmates – individuals who presented very unique security concerns – as the nation's law enforcement efforts were targeted toward international terrorism. By 2013, the BOP's population climbed to almost 220,000, its highest level ever with system-wide crowding at 36 percent.

Although the inmate population has been declining in recent years, as of February 17, 2022, there were 153,053 individuals serving time in federal prisons. BOP facilities and systems/equipment (water, sewer, electrical, and heating/air conditioning), many of which are aged and undersized, continue to be over utilized, which causes extensive wear and tear as well as premature deterioration. In addition, by nature of the environment, the systems are subjected to frequent abuse, which further shortens the life of the

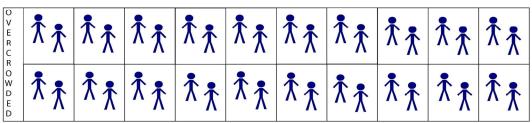

systems/equipment. This extra strain and misuse contribute to the critical need for M&R funds. The BOP faces challenges in managing the existing federal inmate population and providing for inmates' care and safety in crowded conditions at higher security levels, as well as the safety of BOP staff and surrounding communities, within budgeted levels. The BOP strives to accommodate the inmate population using state, local, and private sector contract beds, facility expansion, and acquisition of existing structures, as funding permits.

Rated capacity is the baseline used to calculate prison crowding, and assists in managing the BOP's inmate population to distribute the population throughout the system efficiently and equitably. The calculation for determining rated capacity involves stratified double bunking across all security levels and includes the following formulas: minimum and low security institutions at 100 percent double bunking; medium security institutions at 50 percent double bunking and; high security institutions at 25 percent double bunking.

The following charts show representations of inmate cells at normal rated capacity versus current crowding conditions at low, medium and high security levels:

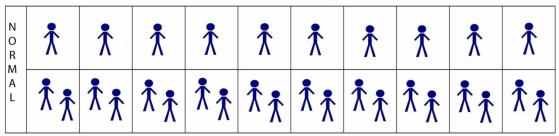

zero crowding example at a **low** security prison Rated Capacity: 2 inmates per cell, 20 cells, 100% double bunked.

Currently, Low security prisons are under capacity and there is no overcrowding.

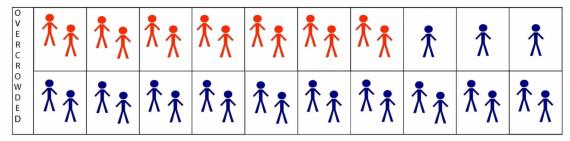

Medium Security

zero crowding

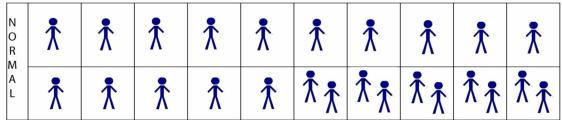

example at a **medium** security prison

Rated Capacity: 2 inmates per cell in 50% of cells. 20 cells, 10 double bunked.

22% crowding as of February 17, 2022 (37 inmates and 30 beds rated capacity) 81% of inmates are double bunked

High Security

zero crowding

example at a high security prison

Rated Capacity: 2 inmates per cell in 25% of cells. 20 cells, 5 double bunked.

O V E R C R	↑ ↑	↑	↑	↑	†	†	†	†	†	†
O W D E D	†	†	†	†	†	↑	↑ ↑	↑	↑	↑

16% crowding as of February 17, 2022 (29 inmates and 25 beds rated capacity) 86% of inmates are double bunked Due to the First Step Act, the BOP inmate population declined in FY 2019, and the decline in FY 2020 is attributed to the COVID-19 pandemic. However, due to the ongoing pandemic, population projections for FY 2022 and FY 2023 remain uncertain.

The following chart illustrates the actual and projected inmate population:

Projected Population, Capacity, and Crowding

	2018	2019	2020	2021	2022	2023
	(Actual)	(Actual)	(Actual)	(Actual)	(Estimate)	(Estimate)
BOP Facilities						
Starting Capacity	135,898	135,175	134,133	134,404	134,735	136,051
Additional	-723	-1,042	271	331	1,316	0
Approved/Planned						
Subtotal Capacity	135,175	134,133	134,404	134,735	136,051	136,051
Pop. Projection	153,291	149,701	126,744	131,647	144,243	147,079
Percent Overcrowded	13%	12%	-6%	-2%	6%	8%
Contract	28,407	27,513	28,818	24,179	17,823	16,329
Percent Contract	15.6%	15.5%	18.5%	15.5%	11.0%	10.0%
Total Federal Prison Population	181,698	177,214	155,562	155,826	162,066	163,408

The B&F appropriation is comprised of two decision units: 1) the New Construction decision unit includes funding to expand existing facilities and acquire or construct new prison facilities; and 2) the M&R decision unit includes funding to maintain existing facilities in an adequate state of repair to provide a safe and secure environment to continue prison operations. M&R projects costing \$10,000 or less are included in the S&E budget, and projects in excess of \$10,000 are normally included in the B&F budget.

The purpose of the M&R program is to provide the necessary resources to undertake essential rehabilitation, modernization and renovation of buildings, other structures, and associated systems. This program provides the necessary modifications to meet legal requirements and accommodate correctional programs. Further, the M&R base program is also responsible for repair or replacement of utilities systems and other critical infrastructure and repair projects at existing institutions in order to keep all systems and structures in an adequate state of repair. The proper maintenance, modernization, and repair of BOP institutions is important to ensure the long-term use of these facilities. Failure to maintain structures and utility systems erodes capital investment and multiplies the costs in future years for accomplishing the required repairs. Most importantly, failure to maintain structures can cause direct and indirect security problems.

The BOP continues to allocate M&R funds primarily for emergency, life safety, and some of the highest priority major projects, annually. The BOP tries to follow the Federal Facilities Council (FFC) Standing Committee on Operations and Maintenance Report Number 131 for maintaining existing prisons. The FFC recommends the BOP funds facilities maintenance programs at a minimum of 2 to 4 percent of their replacement value. Over the years, the BOP has received the following amounts as it relates to the replacement value:

FFC Recommendation 2 to 4 percent

3. Full Program Costs

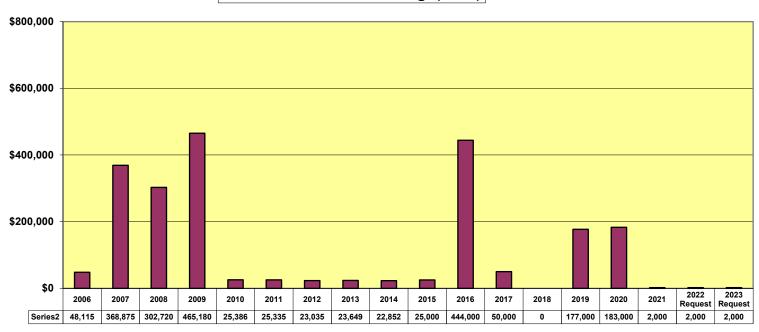

FY 2023 Budget Request by Decision Unit

New Construction Funds: \$2,000,000

For FY 2023, there is no request for a program increase for the New Construction decision unit. New Construction base resources fund land payments of the Federal Transfer Center in Oklahoma City and salaries and administrative costs of staff necessary to carry out the program objective. They also fund environmental requirements and geotechnical exploration, construction of inmate work program areas, expansion and conversion projects, i.e. additional special housing unit space, and any unforeseen preliminary project costs issues, which may arise and are not included in the individual project cost estimate. Further, when BOP has not identified a specific location, new construction base funds for site investigations are required for a project.

The following chart shows the history of New Construction funding levels from FY 2006 to the FY 2023 anticipated:

New Construction Funding (\$000)

Note: The BOP absorbed prior rescissions against new construction project funds of \$45 million in FY 2012, \$64.7 million in FY 2013, and \$3.4 million in FY 2017. Amounts shown include funding for B&F positions, as well as construction projects.

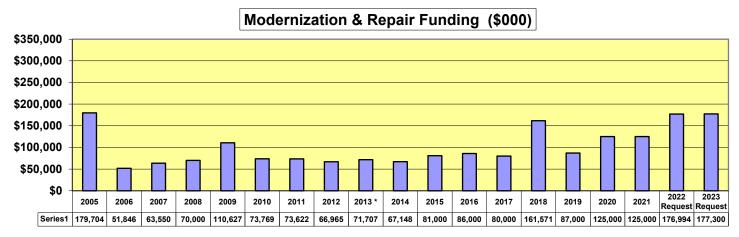

Modernization and Repair: \$177,300,000

Funding for the M&R Program addresses critical repair and security projects in order to safely maintain federal prisons and efficiently manage public resources. For FY 2023, the BOP requests a total of \$177.3 million in M&R base funding. As noted earlier, the FFC recommends that an M&R funding level be 2 to 4 percent of the replacement value of existing facilities. This recommendation would equate to approximately \$704 million at 2 percent and up to \$1.4 billion at 4 percent. The BOP's highest priority projects involve infrastructure, LMR systems, energy savings, and security and life safety needs to include fire alarm repair/replacement; water system renovation; roof repairs; fence repairs; generator/Switchgear/electrical repairs; and elevator and chiller repairs. Priorities are constantly changing as emergencies arise and equipment and/or systems fail.

M&R is an important component of institution security, as deteriorated facilities add to increased risk of escape, inability to lock down cells, and potential violence due to frustration over inadequate living conditions, such as leaking and collapsing roofs. Further, as the condition of these facilities worsen, it can result in off-line housing units, which reduces bed space and increases system-wide crowding.

In addition, M&R base funds reduce further deterioration of prison buildings, infrastructure, and physical plants, and minimize repair costs in order to use the public's investment of \$35 billion in replacement costs in a practical and efficient way. Delays in completing these repairs have increased the number and cost of unfunded projects as well as contributed to additional deterioration of BOP's aging and failing infrastructure. Every year a project is not completed, the amount required for that project increases due to inflation and further deterioration. Inflation varies from state to state and from year to year. On average, for every year funding of a project is delayed, the cost increases at an average rate of 5 percent. Even a modest rate of inflation can seriously erode purchasing power over time. For example, at an inflation rate of 5 percent, \$957,212 is needed in five years to match the purchasing power of \$750,000 today. At the end of 20 years, \$1,989,973 will be needed to construct that same \$750,000 project.

The following chart shows the history of M&R funding levels and requests from FY 2006 to the FY 2023 Request:

* This amount includes \$10 million in Supplemental Appropriation for Hurricane Sandy Relief (FY 2013), for repairs at prisons affected by the storm. In FY 2018, \$34 million in Hurricane Supplemental funds were provided for repairs at prisons affected by Hurricanes Harvey, Irma and Maria, and in FY 2019, \$28 million in Hurricane Supplemental funds were provided for repairs related to Hurricanes Florence and Michael and Typhoon Yutu (funds not reflected in above graph).

4. Performance Challenges

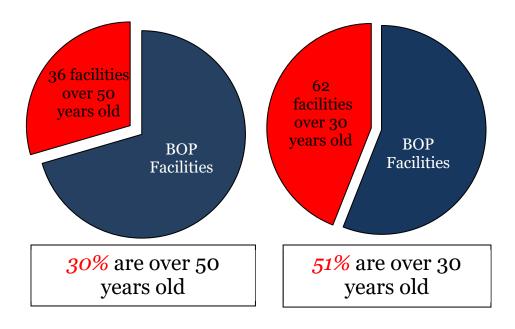

The biggest challenge the BOP faces is managing and providing for the care of the federal inmate population while maintaining the appropriately safe and secure prisons required to ensure the safety of inmates, BOP staff, and surrounding communities. The BOP is most concerned with reducing crowding in higher security institutions, effectively managing federal inmates, and tending to deteriorating infrastructures.

Prison facilities are subjected to much heavier than normal use since they are continuously used 24 hours a day, 365 days a year, in crowded conditions. As a result, the rate of deterioration tends to be higher than other federal facilities, putting an additional strain on BOP's M&R resources. The BOP seeks to address this challenge by reprioritizing projects on a regular basis to ensure that the most critical needs are met, but is often unable to address lower priority projects due to funding constraints. The picture on this page represents one of the priority projects on the M&R backlogged list. The outside wall of A-Cellhouse at USP Leavenworth, KS is in great need of repair. The wall is so deteriorated it appears to be crumbling. Securing sufficient M&R resources to fund repair projects, such as the one pictured, is criticial to the security and safe operations of BOP prisons.

The BOP request for M&R Funding would provide for the essential rehabilitation, modernization and renovation of buildings, and associated systems. Failure to adequately maintain structures and utility systems erodes capital investment and multiplies the costs in future years for accomplishing the required repairs. Most importantly, failure to maintain structures can cause direct and indirect security problems, such as escapes, inability to lock down cells, and violence due to frustration over inadequate living conditions (such as leaking and collapsing roofs). Currently, the BOP only allocates M&R funds for emergency, life safety, and its highest priority projects. For over 10 years, the BOP has received less than 1 percent of the replacement value recommended by the Federal Facilities Council (2 to 4 percent). Failure to maintain the BOP's structures and utility systems inhibits BOP's ability to maintain safe and humane institutions.

About 30 percent of the BOP's 122 institutions are over 50 years old, and 51 percent are over 30 years old. The older an institution becomes, the greater the need for repairs/replacements of systems. Some of the type of repairs that these older facilities could require include infrastructure systems pertaining to water, sewer, electrical, HVAC, fire alarms, fences, roofs, etc. These older facilities present higher needs for repairs and renovations than newer facilities and consume a large proportion of the BOP's M&R resources. The BOP prioritizes its major M&R projects (typically those costing about \$300,000 or more) so that the most critical are funded first in order to maintain safe and secure facilities. Failure to adequately maintain structures and utility systems erodes capital investment and multiplies the costs in future years for accomplishing the required maintenance and repair.

III: Appropriations Language and Analysis of Appropriations Language

Appropriations Language

The FY 2023 Budget Request includes proposed changes in the appropriations language listed and explained below. New Language compared to the FY 2022 President's Budget proposed for FY 2023 is italicized and underlined. The FY language proposed for deletion is bracketed.

Buildings and Facilities

For planning, acquisition of sites, and construction of new facilities; purchase and acquisition of facilities and remodeling, and equipping of such facilities for penal and correctional use, including all necessary expenses incident thereto, by contract or force account; and constructing, remodeling, and equipping necessary buildings and facilities at existing penal and correctional institutions, including all necessary expenses incident thereto, by contract or force account, [\$178,994,000]\$\frac{\$179,300,000}{\$179,300,000}\$, to remain available until expended: *Provided*, That labor of United States prisoners may be used for work performed under this appropriation.

(CANCELLATION)

Of the unobligated balances from prior year appropriations available under this heading, [\$550,000,000] <u>\$886,456,000</u> are hereby permanently cancelled: *Provided*, That no amounts may be cancelled from amounts that were designated by the Congress as an emergency requirement pursuant to a concurrent resolution on the budget or the Balanced Budget and Emergency Deficit Control Act of 1985, as amended.

Analysis of Appropriations Language

The language includes a total cancellation of \$886.5 million from the Buildings & Facilities balances.

No Information Technology for this program.

1. Program Description

New Construction

The BOP requests a total of \$2,000,000 for the New Construction base program to support salaries and administrative costs of staff necessary to carry out the New Construction program objective.

New Construction base resources fund land payments of the Federal Transfer Center in Oklahoma City and salaries and administrative costs of staff necessary to carry out the program objective. They also fund environmental requirements and geo-technical exploration, construction of inmate work program areas, expansion and conversion projects, i.e. additional special housing unit space, and any unforeseen preliminary project costs issues, which may arise and are not included in the individual project cost estimate. Further, when BOP has not identified a specific location, new construction base funds for site investigations are required for a project.

As the final component on the law enforcement pipeline, the BOP has little control over the size of its population or the duration of inmates' incarceration. By law, the BOP must accept all inmates sentenced to confinement by the Federal courts. In addition, in accordance with the D.C. Revitalization Act of 1997, the BOP must accept responsibility for the District of Columbia sentenced felon population.

The BOP regularly reviews capacity requirements, considers the current and projected inmate population levels, current law enforcement initiatives, geographic origin of the confined population, and the age and condition of existing facilities. The BOP strives to manage the existing large population and resulting crowding, at higher security levels, to ensure that federal inmates continue to serve their sentences in a safe and humane environment. The BOP continues to explore opportunities for increasing capacity through the activation of current facilities, utilization of contract facilities, expansion of existing facilities, acquisition and conversion of military and other properties to prison use, and

the ongoing design and construction of new prisons, consistent with capacity planning and available funding.

From a cost perspective, BOP considers the expansion of existing institutions to be a cost effective technique for increasing prison capacity, and the BOP has added housing units at facilities where program space and systems infrastructure can absorb further population increases. However, where major program and support areas, such as food service and utilities, are at capacity, institutional expansion may be cost prohibitive and other alternatives are considered.

GAO Report 08-634, *Prison Construction*, recommended that the BOP communicate in DOJ's annual Congressional budget submission: (1) the extent to which project costs may vary from initial estimates, and (2) changes that may impact the functionality of projects.

- (1) Actual Costs May Vary from Initial Estimates The cost estimates appearing on the Status of Construction exhibit are preliminary and are updated periodically based on the following factors: when full construction funds are anticipated to become available, geographic location, historical and projected cost escalation, and allowances for uncertainty as to actual sites to be developed. Although cost escalation has been lower in previous years, preliminary cost estimates historically increase (approximately five percent or more) each year until full funding is provided for projects and construction contracts can be awarded.
- (2) Changes from the FY 2022 Congressional Budget The FY 2023 Congressional Budget proposes a total cancellation of \$886.5 million in unobligated B&F balances, including \$867.5 million from New Construction balances. The cancellation will come from the USP Letcher County, KY construction project (\$506.5 million); the FCI Leavenworth, KS prison construction project (\$361 million) and from the Modernization and Repair balances, a reduction of \$19 million from balances reserved for repairs to the Taft Correctional Institution.

Program Activity	New Construction	FTE 8	\$000 2,000	FTE 8	\$000 2,000	FTE 17	\$000 \$2,000	FTE 0	\$000 \$0	FTE 17	\$000 \$2,000
Performance Measure	Number of Environmental Impact Studies/Environmental Assessments completed		1		0		1	-	1		0
Performance Measure	Performance Number of major construction		0		0		1		1		0
Performance Measure	System-wide crowding level	12%			-2%		6%		%	8%	
OUTCOME	Number of facilities completed		0		0		0	0		0	

Data Definition: The crowding levels are based on a mathematical ratio of the number of inmates divided by the rated capacity of the institutions at each of the specific security levels. The percent of crowding represents the rate of crowding that is over rated capacity. For example, if an institution had a number of inmates that equaled the rated capacity, this would represent 100% occupancy, which equals 0% crowding. Any occupancy above 100% represents a percentage of crowding. System-wide: represents all inmates in BOP facilities and all rated capacity, including secure and non-secure facilities, low, medium, and high security levels, as well as administrative maximum, detention, medical, holdover, and other special housing unit categories. For new construction projects, a Notice to Proceed (NTP) is issued by the contracting officer, shortly after award of a design-build contract. The NTP authorizes the contractor to begin work under the contract, initially the start of design. Mission critical facilities are all existing BOP institutions.

Data Collection and Storage: Data are gathered from several computer systems. Each project is assigned a specific project code. Each obligation and expenditure is entered into the Unified Financial Management System (UFMS). Awards of design-build contracts for new construction projects are maintained and monitored through the BOP's fund control system and DOJ's UFMS. Inmate data are collected on the BOP on-line system (SENTRY). The BOP also utilizes a population forecast model to plan for future contracting and construction requirements to meet capacity needs.

Data Validation and Verification: Within BOP headquarters, staff retrieve and verify data on a daily basis, analyze it, and formulate reports and projections. Purchase requests for design-build contracts are approved by specific project management staff (based on dollar threshold limitations); commitments are entered into a computer based fund control system; and purchase requests are forwarded for procurement action. Once the procurement office awards a contract/purchase order, the obligation is entered into the DOJ UFMS. Each month, UFMS obligations are reconciled with the BOP's fund control register by project, and forwarded to the Central Office Finance Branch, Business Office, to ensure accuracy and compliance. The contracting officer issues the NTP, shortly after award of a design-build contract. The award of a contract is based on completing the procurement of the contract and receipt of the necessary environmental or political requirements or clearances. Subject matter experts review and analyze population and capacity levels daily, both overall and by security level. BOP institutions print a SENTRY report, which provides the count of inmates within every institution cell house. The report further subdivides the cell houses into counting groups, based on the layout of the institution. Using this report, institution staff conduct an official inmate count five times per day to confirm the inmate count within SENTRY. The BOP Capacity Planning Committee (CPC), comprised of top BOP officials, meets quarterly to review, verify, and update population

projections and capacity needs for the BOP. Offender data are collected regularly from the Administrative Office of the U.S. Courts by the BOP Office of Research and Evaluation in order to project population trends. The CPC reconciles bed space needs and crowding trends to ensure that all available prison space is fully utilized, both in federal prisons and in contract care.

Data Limitations: Due to the unpredictable environment in prisons and other external factors, there may be discrepancies between projected and actual numbers contained in the performance tables. Most plans are developed based on historical data, and past experience to project for the future. In addition, budget delays and shortfalls also affect performance results. The time required for a project to go from NTP to "completion" depends on numerous factors, such as: the extent of site development or remediation activities required; climate of the project site (how many months of good construction weather); what time of year the NTP is issued; unusual weather; unforeseen site conditions; and quality of management by the contractor.

1. Program Description

Modernization and Repair

For FY 2023, the BOP requests a total of \$177,300,000 for the Modernization and Repair (M&R) base program. This program is intended to provide the base resources to undertake rehabilitation, modernization, and renovation of buildings, other structures, and associated systems. It is also intended to make necessary modifications to meet legal requirements and accommodate correctional programs; repair or replace utilities systems; and complete other infrastructure and repair projects at existing institutions in order to keep all systems and structures in a good state of repair. Failure to adequately maintain structures and utility systems erodes capital investment and multiplies the costs in future years for accomplishing the required maintenance and repair. Most important, failure to maintain structures can cause direct and/or indirect security problems.

Inmate work crews perform most maintenance and repair projects. This provides instructional work for inmates and labor for the performed work. Inmate work crews require staff supervision to direct the work being performed and to promote institutional security.

Almost one-third of the BOP's 122 institutions are over 50 years old, and 50 percent are over 30 years old. Further, most have not undergone major renovations from the time they were constructed, or acquired and converted to prison use, by the BOP. Each facility has numerous buildings on the compound, including inmate living quarters, many of which require extensive work to maintain an adequate state of repair to assure that they meet established standards. Prison facilities have much heavier than normal use due to continuous use 24 hours a day, 365 days a year, in crowded conditions. Inmate overutilization of prison facilities' systems leads to extensive wear and tear as well as premature deterioration. This is especially true in many of the older facilities where the utility system infrastructures (water, sewer, electrical, and heating/air conditioning) were originally designed for a smaller inmate population.

Institutions perform detailed annual inspections of all areas of their physical plants and provide a list of projects to their regional office for all items that are in need of remedial action. The regional offices consolidate major project request lists from their facilities and forward the priority lists to the central office. The central office prioritizes all the major M&R project requests (typically those over \$300,000) submitted by the regions and allocates funds for as many projects as practical. Currently, the BOP has 956 ongoing major and minor M&R projects at various stages of completion. Individual project costs range from \$10,000 to about \$13 million.

The BOP M&R projects are classified under five general categories for internal management purposes (Life Safety, General Improvements, Infrastructure Improvements, Hazardous Waste, and Energy Savings). Within each of these categories are special projects to meet various regulations and codes requirements. Life Safety projects are required to make corrective actions in order to comply with National Fire Code (NFPA 101) standards. General Improvement projects modernize and/or improve equipment, entire rooms, such as kitchens, or buildings that require total rehabilitation of structures, including walls, floors and windows. Infrastructure Improvement projects modernize or replace utilities, such as water pipes and electrical systems. Hazardous Waste projects abate hazardous waste, such as asbestos, through removal, encapsulation, and other methods as necessary. Energy Savings projects conserve energy by using more energy efficient equipment and systems. Energy projects are also required to meet pertinent energy conservation laws and regulations.

The five categories may also contain subcategories of projects (such as Accessibility, Environmental, and others) to meet specific needs. For example, General Improvement projects may each include smaller Accessibility projects to meet Architectural Barriers Act requirements. Environmental projects are necessary for the BOP to be in compliance with environmental and safety regulations required by the Environmental Protection Agency (EPA) and the Office of Safety and Health Administration (OSHA).

The M&R program has demonstrated substantial improvements through the project time limit policy and the two percent replacement value method of requesting funding. These changes have helped the BOP complete more projects in a shorter period and stretch its repair dollars.

2. Performance and Resource Tables

			PER	FORMANCE	AND RESOUR	CE TABLE

Data Definition:. The total M&R projects active and those completed and closed are obtained from BOP's database in Microsoft Access that is used to establish and monitor B&F projects. Projects are considered active as soon as they are established in the database. Projects are considered completed and closed once they are officially closed in UFMS at which time the project is closed in BOP's database. The age of BOP facilities is calculated from a database developed to identify the year each institution was constructed. The three-year time limit policy for Modernization and Repair (M&R) projects means that institutions are allowed three years to complete scheduled projects or the project is canceled and the funds are committed to other high priority M&R projects. To ensure that electronic equipment utilized for life safety sustains trouble-free operation, the BOP schedules life cycle equipment replacement based on a ten-year cycle. The critical equipment is radio systems and PBX (Public Branch Exchange) systems. Mission critical facilities are all existing BOP institutions.

Data Validation and Verification: Within BOP headquarters, staff retrieve and verify data on a daily basis, analyze it, and formulate reports and projections. Subject matter experts review and analyze population and capacity levels daily, both overall and by security level. Purchase requests are approved by specific project management staff (based on dollar threshold limitations); commitments are entered into a computer based fund control system; and purchase requests are forwarded for procurement action. Once the procurement office awards a contract/purchase order, the obligation is entered into the DOJ UFMS. Each month, UFMS obligations are reconciled with the BOP's fund control register by project, and forwarded to the Central Office Finance Branch, Business Office, to ensure accuracy and compliance. M&R data is maintained in the Microsoft Access database and is verified periodically against UFMS which also tracks the financial status of projects. On an annual basis, the BOP's Central Office Facilities Branch documents which electronic equipment, utilized for life safety, will be at the end of the ten year life cycle. This is accomplished through review and evaluation of the systems by field staff, the contractor, and close monitoring of the TMS program. Each information on the critical equipment is reviewed and verified by their respective Regional Office for accurate dates and equipment condition. Data are gathered from several computer systems. Each project is assigned a specific project code. Each obligation and expenditure is entered into UFMS. M&R projects are closely monitored to ensure completion and closure prior to the 3-year time limit. At

the start of every fiscal year, the BOP's Central Office identifies the M&R projects that will reach the 3-year time limit by the end of that fiscal year. The BOP relies on an in-house house data base in Microsoft Access and DOJ's UFMS to effectively track and manage M&R projects (dates and costs). The BOP uses the Total Maintenance System (TMS) program to determine nationally which radio, PBX System and equipment qualify for replacement annually, based on age and performance.

Data Limitations: Due to the unpredictable environment in prisons and other external factors, there may be discrepancies between projected and actual numbers contained in the performance tables. Most plans are all required equipment replacements based on the ten-year life cycle developed based on historical data, and past experience to project for the future. In addition, budget delays and shortfalls also affect performance results. For example, due to budget shortfalls in the M&R program projects could not be completed due to limited funds, and some replacements had to be delayed to the following year.

VI. Program Offsets by Item

Item Name: Cancellation of Unobligated Buildings and Facilities (B&F) Balances

Budget Decision Unit: New Construction and Modernization and Repair

Organizational Program: New Construction and Modernization and Repair

Program Reduction:

Pos. Agt./Atty. FTE (\$000)

-\$886.456

Description of Item

The budget proposes to cancel a total of \$886,456,000 in unobligated B&F balances. This is a three part cancellation of funds, as \$506.5 million will be from the Letcher County, KY construction project balances; \$361 million will be from the Leavenworth, KS construction project balances; and \$19 million will be from the Taft Correctional Institution (CI), CA facility repair costs.

Justification

The budget proposes a cancellation totaling \$506.5 million from the New Construction decision unit for the Letcher County construction project and \$361 million from the Leavenworth construction project. These projects were initially designed to reduce overcrowding by adding bed space, but over the past few years, the inmate population has decreased system-wide.

Finally, a cancellation of \$19 million is requested for the Taft CI repairs project from the M&R decision unit. In 2019, BOP hired an outside contractor to conduct an in-depth facility assessment report for Taft CI. This assessment was initiated in response to significant and unsafe ongoing structural damage to some of the buildings caused by major ground settlement. The assessment included a structural evaluation and a review of all systems, including security, utilities, site infrastructure, accessibility, and mechanical, plumbing, and electrical systems. The assessment identified two major issues resulting in the structural damage: ongoing subgrade soil settlement and major deficiencies in all buildings as a result of seismic activity. The assessment concluded that the majority of the buildings, to include inmate housing units, program areas, staff offices and security areas, were unsafe to occupy, which led to shutdown of the facility with staff and inmates being removed. In FY 2020, the BOP was provided \$27 million for repairs at the Taft CI, through language in the Explanatory Statement accompanying the FY 2020 appropriation that directed the BOP to prioritize repairs that protect life and safety and to prioritize facilities assessed as having deficiencies of a geological and seismic nature. The BOP utilized approximately \$8 million in funds towards pre-design and award of design work. Due to these site factors, this project is uniquely expensive and the Taft population has already been absorbed by nearby facilities with minimal disruption

Impact on Performance

Rather than investing in new construction, or in repairs for a facility with extensive repair needs, the BOP plans to leverage existing capacity within the BOP's facilities.
